DISCUSSION: The Site Inspection Prioritization (SIP) report for this site prepared by the Alternate Remedial Contracting Strategy (ARCS) contractor was reviewed. This site an inactive asphalt and fuel oil refinery. Primary wastes generated were refinery wastes, oily wastes, tarry wastes and miscellaneous sludges. Sources on-site include an area of contaminated soil and a surface impoundment area.

There are no drinking water wells located in the area of the site, minimizing the threat via the ground water pathway.

Due to the flood protection levees that surround Destrehan and the site, there are no drinking water intakes located in the surface water within 15 miles downstream of the site.

There are no residents on-site and the closest residence is located 0.25 miles from the site. A fence has been constructed to limit access to the site area, thus minimizing the threat by the soil exposure pathway.

Amoco Oil Company and the Louisiana Department of Environmental Quality (LDEQ) are in the process of reaching an agreement that will bind Amoco Oil Company to perform remedial action, maintain monitoring and respond to new developments that may arise at the site.

Based on the results of the SIP, this site will not qualify for further consideration as a potential candidate for inclusion on the National Priorities List of Superfund sites. A decision of No Further Remedial Action Planned will be recommended and the site will be referred to the LDEQ for any further action, if appropriate, under state regulations.
